# Reversing the sequence

You are given a sequence of 64-bit integer numbers. Your task is to write a program that produces the reversed version of the given sequence.

## Implementation details

You should implement one function (method):

- `int64[] reverse(int64[] a)`.
  - `a`: given sequence.
  - function should return the reversed sequence.

## Examples

### Example 1

`reverse([1, 2, 3])`.

The function returns `[3, 2, 1]`.

### Example 2

`reverse([-3, 4, 6, -8, 9])`.

The function returns `[9, -8, 6, 4, -3]`

## Subtasks

This task has only one subtask costs 100 points, the length of the sequence is at most 100,000 .

## Sample Grader

The sample grader reads the input in the following format:

- line 1: integer  $n$  ,
- line 2:  $n$  integers  $a_i$  .

## Language Notes

Please use the provided template files for details of implementation in your programming language.
